

TuneMyBG LLM reproducibility — plain-English summary

Package generated 2026-08-21 covering 2026-08-07 to 2026-08-21 (14 days). Glucose: mean 117.0 mg/dL, time in range 99.7%, below range 0.0%, CV 12.9%. Carb entries logged: 28.

Each run is a brand-new conversation: package attached with Prompt 1, then Prompts 2, 3 and 4 in turn, then the app's correction prompt once if the JSON failed the app's checks. AAPS defaults are from nightscout/AndroidAPS master @ 598e2eb (2026-08-02).

gemini-3.6-flash — 50 runs (gemini36flash_50)

At a glance

- App outcome over 50 completed runs: accepted first time 50; accepted after the repair prompt 0; invalid JSON with no prompt offered 0; schema stop with no prompt offered 0; still rejected after repair 0. Dead ends (no way forward in the app): 0.
- Strict compliance with Prompt 4's own rules (which the app does not fully check): 49/50 (98%) of runs first time.
- Settings changed per run: 0–0 of 22 (most runs: 0).
- 35 settings were left unchanged in every single run; 0 were changed in at least one run, of which 0 were changed in more than half the runs.
- Headline profile recommendation focus: basal in 40/50 (80%), cr in 10/50 (20%).
- Profile recommendation decision: keep x50.

Changed in at least one run

Frequency is how many of the runs suggested a different value for that setting. Range is the spread of the suggested values across those runs.
